

The Securion adventures

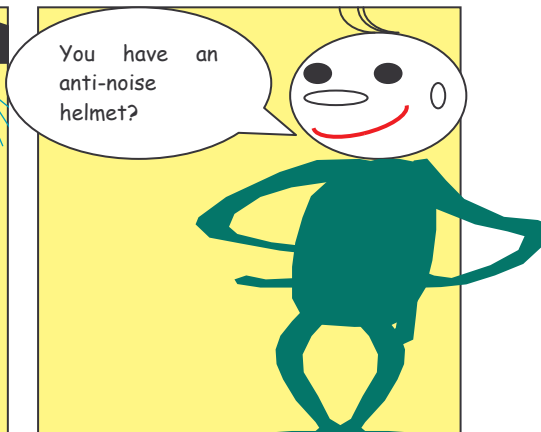

Securion arrives on earth

Securion arrived on earth with a spaceship. It came from the SMT planet (Safety My Treasure). Its arrival was noticed. Indeed, Securion landed in a field by making a deafening noise.

Mr JESAISFAIRE passed thereby in his car. He went to his factory. He is a safety engineer. By chance, this morning, he had with him an anti-noise helmet. He put it when he came out of the car to go to see what occurred.

What a noise!

You have an anti-noise helmet?

The noise decreased, Mr JESAISFAIRE removed its helmet.

Yes! It is one of those that I have just bought for the workers of my factory

I hope moreover that this time, they will carry them because I repurchased new more efficient and comfortable helmets than the old.

And you bought only one type of helmet?

Yes why? since I took the best one?!

In fact, on my SMT planet, we had the same problem!

And then we proposed four types of equivalent helmets and we asked the operators to choose.

But it is my work to choose the best type of helmet!?

Is it not rather to achieve a safety goal in terms of helmet carry?

And there are often several means to achieve the same goal!

It is true after all!

In fact, anti-noise helmets also are elements that one has to appropriate. The decision that I take is still accepted better than that one which comes from another person!

And, additionally, one always likes to state his difference from the others, even if one is proud to raise the same uniform. Look at, you carry a costume like your colleagues but not of the same colour!
